

# JFL700WE FLUTE

The Jupiter JFL700WE Flute is the perfect instrument for teaching young children the joys of playing music. Its patented "WAVE-LINE headjoint" alleviates the ergonomic concerns many instructors experience while teaching beginning students to play. Its shortened overall length is more ergonomic for the smaller body-types of younger players while its unique shape keeps the headjoint in line with the body, promoting correct playing posture. This ergonomically designed instrument improves performance posture and makes the transition to a standard flute easy. This and other key features make the JFL700WE flute the right choice to help children enjoy the pleasures of making music.

## Easier to Play

The stable "Wave Line" design reduces the distance between embouchure hole and keys creating better instrument alignment and easier tone production.

## Easier Assembly

Specially engraved alignment indicators located on the headjoint and body ensure correct assembly and optimum position placement.

## Portability and Protection

Includes a sleek, zippered case with an adjustable shoulder strap for lightweight yet durable transport.

## Innovative Design

An optional extension kit is available which converts the JFL700WE to a full-size standard flute. The kit includes an extension barrel, a complete headjoint with a .925 Sterling Silver riser, and a French-style ABS case with shoulder bag. This kit extends the useful life of the instrument making the best of your investment as your student continues to grow musically.
