

1100 SERIES FRENCH HORN

JHR1100/JHR1110

DISTINGUISHED PERFORMANCE

JUPITER

The Jupiter Double Horns JHR1100/JHR1110 have a refined bore and medium-larger throated bell that together produce incredible response and playability. The instruments are built around the popular Geyer wrap configuration reducing resistance for a more even tonality throughout the instrument range. The Performance Level Double Horns possess a tonal color and transparency that are well suited for multiple performance applications and provide remarkable volume and sonic brilliance.

Power and Projection

The specially designed yellow brass bells and rose brass mouthpipes are created to ensure uniform thickness. The end result is an instrument that produces a commanding tone with defined clarity perfect for the most demanding repertoire.

Crafted to Perform

The combination of double-lapped rotor valves with a newly designed mechanical linkage and nickel silver rotor casing ensure improved action and agility.

Built for Dependability

Enhanced bracing throughout the instrument transmits increased tonal resonance while providing more strength for better alignment and greater durability.

Comfort and Playability

An adjustable thumb lever repositioned on the 2nd valve casing facilitates more centralized operation of the 4th rotor mechanism giving the player greater comfort and smoother action.

ABS Case

- Modern Design ABS Case
- Solid Hardware for Great Protection and Durability

Black Backpack

- Black Premium Material with Stylish Design
